

Client Content Checklist

Everything on the site that’s currently placeholder, plus everywhere real copy/photos/info still need to come from the client. Grouped by type; “Not placeholder” section at the bottom is already real and just needs a final proofread pass.

Photos & video

Location	Current	Needed
Home hero	Stock video (<code>hero.mp4</code>)	A real walkthrough clip or photo of one of her staged spaces
About portrait	Stock photo (<code>about-portrait.jpg</code>)	A real photo of her (headshot or environmental)
Services — all 6 rows	Stock photos (<code>gallery-01/03/04.jpg</code> , stock slider images)	One representative photo per service
Portfolio before/afters (3 categories × 2 projects)	Stock “before” and “after” pairs	Real before/after pairs from her actual projects, per category
Portfolio masonry grid	<code>public/media/gallery/</code> — currently seeded with the same stock photos (plus some test files dropped in while trying out the new folder system)	Her own photos/videos, just dropped into that folder — genuinely self-serve now, no code changes needed, just a rebuild + redeploy after

Copy

Location	Current	Needed
Testimonials (Home)	3 placeholder quotes, all “Placeholder Client,” locations (North York/Mississauga/Oakville) invented	3 real client quotes, names (or “verified client” if she prefers anonymity), and real locations
Press mentions (Home)	“Toronto Star” and “Global News” logos/names	Worth double-checking with her: no paper trail confirming these are real placements. If she wasn’t actually featured by both, this needs to come out or be replaced — claiming press coverage that didn’t happen is a liability, not just a content gap

Business info / integrations

Location	Current	Needed
Phone number	<code>(416) 555-0100</code> everywhere (footer, Contact page, schema markup)	Her real business number
Email	<code>hello@homestagingvisuals.com</code>	Confirm this is her real inbox, or provide the correct one
Social links (footer)	All three (Instagram/Facebook/TikTok) point to <code>#</code>	Her real profile URLs
Domain	<code>homestagingvisuals.com</code> hardcoded in SEO/schema	Confirm once purchased — Task 11 item
Contact form	Formspree endpoint is a placeholder (<code>YOUR_FORM_ID</code>)	Her Formspree account set up, real endpoint dropped in — this one’s on us, not her, but blocked until she’s ready to own that account or hand off billing

Location	Current	Needed
About page schema	<code>name: "[Business Owner Name]"</code> in the structured data	Her actual legal/business name

Not placeholder (already real — proofread only)

- Stats: 13+ years, 1000+ properties, Toronto/GTA
- About bio text and credentials (Sheridan College diploma, 13+ years)
- Google Rating widget: pulling her actual 4.4★/7-review profile
- Services list (6 items) and descriptions
- Portfolio category descriptions
